NATIONAL AND STATE HOLIDAYS

The commemoration of the dates of national independence is assuming more and more importance in Tepoztlán. Thanks to the labor of the school, the national holidays of September fifteenth and sixteenth have become outstanding fiestas in the village—only the Carnaval is still more popular. Preparations are begun at least two months prior to September fifteenth. The children are the first to begin the campaign in the homes, for they are told by their teachers to ask for new uniforms for the parade. Despite the burden of such expense, many parents purchase the uniforms. All the local officials, the president, the councilmen, the judges, the director of the school, and the collector of rents, prepare for the event and all attend. Speakers from the governor's office in nearby Cuernavaca are usually invited, and the populace turns out to hear them.

The state of Morelos has its own civic fiestas which are celebrated with considerable flourish. Among the most important are the celebration of the birthday of Father Morelos, after whom the state was named, and the birth and death of the great General Emiliano Zapata, the most popular hero in the state. As in the case of the national fiestas, the school is the organizing and driving force in the celebration of these fiestas; however, they are not on as large a scale as national fiestas. The teachers and the school director generally make speeches, reviewing the great achievements of the hero Zapata, and they do not fail to point out that at least five of Zapata's generals were from Tepoztlán. In addition to these local celebrations, Tepoztecans often send a delegate to the official state celebration of Zapata's birthday.

The state also has its popular song writers, and its songs dwell on local history or local scenes, easily recognized as Morelos songs by the lyrics if not by the music.

MOVIES

Mexican movies have also broadened the Tepoztecan view of Mexico and the world. More and more the younger generation see an occasional movie in Cuernavaca, and sometimes a movie comes to Tepoztlán to be shown in the plaza at a small cost.

ADMINISTRATIVE FACTORS

At least half a dozen federal government agencies have files on Tepoztlán. These files contain correspondence with the village and provide us with a more or less objective record of Tepoztlán and national agencies. Most of the files date from the early twenties and reflect the increasing role of these agencies in village life in the post-Revolutionary period. The agencies which have the fullest records are the Departamento Agrario, Forestal, Asuntos Indígenas, Economía Nacional, Salubridad, and Asistencia Social.

It is not my purpose to give a detailed account of all the federal agencies which may directly or indirectly influence Tepoztlán. However, the more salient ways

243 433 pasture. For this reason, many farmers hire several peons at this time, involving an outlay of cash. At least one peon is often hired during the plowing and seeding and the first cultivation. Farmers not owning oxen and plows must rent them.

The cost of production does not always have relation to the amount of corn produced, because some fields require more work than others. In the specific cases given in Table 33 the larger production was offset by higher costs (about 32 pesos per *carga* in Plot I) and conversely, the plot which required least outlay in cash or labor yielded the least corn (about 24 pesos per *carga* in Plots II and III). Differences [435] in cash value of the corn produced are due to the changes in market price. Those who are forced to sell immediately after the harvest receive lower prices than those who hold on.

HOE CULTURE

241 311 The land used for *tlacolol* (hoe culture) is of two distinct types, located in different areas of the municipio. One type is known as *texcal*, which is covered with black volcanic rock and a semi-deciduous scrub forest in which the leaves fall and rot during the dry season and make a rich but thin topsoil in little pockets among the rocks. The other type of land is known as *cerros*, and refers to the mountainsides. Most of the *cerros* used for *tlacolol* are of lime rockbeds with many rock outcroppings and scrub forests, but of a somewhat different nature than in the *texcal*. Both types of land are at some distance from Tepoztlán, so that the farmers [484] who work this land must spend approximately two hours each way in going and returning from work.

241 423 The use of the communal lands for *tlacolol* is a fairly recent phenomenon in spite of the fact that Tepoztlán has had its communal lands since pre-Conquest times. Before the Revolution of 1910-20 during the Díaz regime, the well-to-do [661] *caciques* who controlled the political life of the municipio forcibly prohibited the [631] use of the communal lands for *tlacolol*. As we have indicated earlier, their primary motive was to assure themselves of a labor supply for their own lands. One of the [669] principal changes in the economic life of the village brought about by the Revolu- [642] tion was to deprive the *caciques* of their power and to return to the people the right to use their communal lands. But in the years immediately following the Revolution, that is between 1920 and 1927, relatively few individuals became *tlacololeros*. The population of the village was still small and there was a relative abundance of rentable land because of the absence of many families from the village.

241 423 648 In 1927 the municipio lost control of the *tlacolol* lands, which passed to the jurisdiction of the forestry department. At this time Tepoztecans lost their right to work *tlacolol* because the forestry department, as part of its national program of conservation and prevention of soil erosion, forbade the indiscriminate cutting [654] and burning of trees—an integral part of the process of preparing *tlacolol* land for cultivation. With the rapid increase of population in the thirties, the shortage [185] of land became acute and the need for the *tlacolol* land urgent. Many individuals began to open *tlacolol* plots illegally and were fined.

other school, and that there was no doctor in their village. One dignified, elderly Tepoztecan expressed the general attitude when he said, "Many people have come here to study us, but not one of them has helped us."

At the same time the Mexican government, through its Department of Health and Welfare, was concerned over the problem of resistance to modern medicine in some of the rural areas. They wanted to know more about the reasons behind the apparent lack of confidence in modern doctors and the difficulties encountered in trying to win the villagers away from native *curanderos*.

Acceding to the wishes of both the villagers and the government, we decided to set up a small medical clinic in Tepoztlán. The villagers had made it clear that if they were to cooperate by satisfying our research aims, they would expect something practical in return. They had expressed a need for improved medical service, and the clinic appeared to be a good answer to the problem. Federal officials similarly declared themselves more willing to cooperate with us if some of our research work was designed to throw light on problems faced by the government. The Department of Health and Welfare was reluctant to furnish a doctor solely to perform examinations in connection with purely theoretical research on personality development, as we had requested, but readily agreed to send a doctor to treat patients of the proposed medical clinic in Tepoztlán. The Department also became very much interested in our suggestion that the doctor experiment by discussing disease and cure with his patients in terms of native concepts, rather than ignoring these as "unscientific," as a method of establishing rapport and winning confidence.

The plan to establish a clinic thus appeared to answer expressed needs of both local and government people and to provide a way for us to obtain the active cooperation of both these groups. Arrangements were made to obtain the facilities for the clinic, and a doctor was sent by the Mexican Health and Welfare Department. The clinic was only one part of a broader program of services made available to the villagers at their behest. In addition, two agronomists and four social workers were brought in to serve the villagers. Little or no opposition was encountered to their work and to the research itself.
